# IT PAYS TO FIT THE BEST

## NGK Spark Plugs The No.1 choice. Why?

As engine design becomes ever more sophisticated, NGK are committed to delivering the spark plugs that can be relied on to deliver - whatever the demands. That is why we are the No.1 choice of car manufacturers and why you should always insist on the best. NGK Spark Plugs.

**Box**  
**Clever**  
It pays to fit the best

This catalogue is intended for vehicles/engines officially imported or manufactured in the UK and supersedes all previous versions, which should be disposed of. Whilst every care is taken in compiling these lists of applications, they are given for general guidance only, and do not constitute any contractual term, representation or warranty and as such NGK Spark Plugs (UK) Ltd. do not accept any responsibility in respect of any claim whatsoever and howsoever caused arising from the publication of this catalogue.

NGK and NTK products are designed solely for use in automotive, motorcycle, marine, horticultural, agricultural, commercial, industrial, and stationary engines.

**NGK and NTK products should not be used in aircraft engines.**

Resistor spark plugs should always be used where they are recommended by the manufacturer. The use of non-resistor plugs could, in some cases, result in interference with and/or damage to electronic components.

**NGK and NTK products listed in the application guides do not apply to racing or modified engines, except where explicitly stated.**

# SPARK PLUG DESIGN

## SPARK PLUG DESIGN

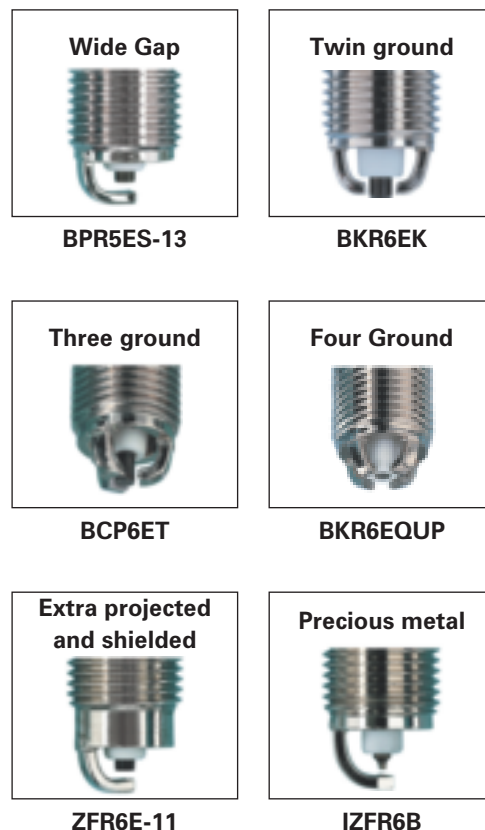

Every year the range of NGK spark plugs grows to accommodate the ever increasing demands of modern engines. Spark plug design must take into consideration many features of an engine including physical dimensions, combustion chamber shape, cooling abilities, fuel and ignition systems. Spark plugs play a vital role in producing the maximum power from an engine whilst keeping fuel consumption and emissions to a minimum. Choosing the correct spark plug type will help a vehicle manufacturer meet legislated emission targets and assists the motorist in getting the best from their engine.

Increases in the size and the requirement to improve the cooling of the inlet and exhaust valves have meant that the space available for the spark plug is severely restricted on some cylinder heads. A change in spark plug design, possibly the adoption of a taper seat and extended reach (threaded portion) or even the use of a smaller diameter is often the answer. Some engines require the use of two spark plugs per cylinder and again due to space restrictions these might be of different sizes.

Changes in fuelling systems and the fuel itself have meant some special features being adopted at the 'firing end' of the spark plug. Extra projected types push the spark position into the heart of the combustion chamber to promote better combustion of the fuel/air mixture, which is weaker than ever in an effort to improve economy. Modern engine manufacturers often require increased spark gaps to allow a longer spark duration, which again aids more efficient combustion.

To combat the 'cold fouling' effect that can occur in some engines using unleaded fuels specially arranged ground electrodes are sometimes used. These can force the spark to discharge across the insulator and thus burn away any built up carbon that could cause poor starting or misfires. It is not uncommon to find two, three or four ground electrode arrangements in new vehicles. The use of precious metals on the tips of the spark plug electrodes is not uncommon especially on higher performance engines. Whilst these spark plugs do have increased service life they are often specified because of their superior ignition qualities.

Our engineering departments work very closely with the engine and vehicle manufacturers to produce the ideal spark plug type for each application. Any change in production is expensive for a manufacturer and therefore new spark plug types are only produced where necessary. NGK employ the very latest production technology to ensure that every aspect is catered for – performance, economy and value.

## HEAT RANGE AND HEAT DISSIPATION

Spark plugs do not produce heat in the combustion chamber. One of the functions of the spark plug is to dissipate some of the heat produced during combustion. This is mostly transferred into the cylinder head. The 'Heat Range' indicates the measure of the spark plug's ability to do this.

A 'hot' spark plug is designed to maintain a sufficiently high temperature at the insulator nose to burn off carbon and oil deposits. A 'cold' spark plug is designed to allow a faster transfer of heat to the cylinder head thus preventing overheating and premature failure.

The heat range selection is obviously a complex task with many factors to take into account. NGK engineers therefore make specific recommendations for each engine and the use to which it is put.

# NGK'S COPPER CORE TECHNOLOGY

## WIDE HEAT RANGE

A wide range spark plug is more flexible and performs equally well in a hot or cold engine under stop and go city driving or fast motorway cruising. Engines that tend to run hot need cold type plugs. Those that run cold demand a hotter type. The specific plug for any engine is determined by the plug's heat range. That is the minimum and maximum temperatures between which the plug will offer optimum performance.

The heat range of NGK Spark Plugs is wider than ordinary plugs therefore they are suitable for both high speed and low speed driving. Compared with conventional plugs of the same pre-ignition rating they have more resistance to fouling. Compared to ordinary plugs with equal anti-fouling resistance, NGK Spark Plugs have a higher pre-ignition rating.

## NGK'S HEART OF COPPER

Copper wire used in place of the iron core in conventional plugs is the secret of NGK's Wide Heat Range. Copper's superior heat conductivity dissipates heat quicker. It cools the electrode tip and insulator tip which prevents hot spots that could cause pre-ignition. Increased heat resistance does not affect fouling resistance, which is primarily determined by the insulator nose length. The longer the nose, the more susceptible it is to heat and the more free from fouling. By raising the pre-ignition rating with the high conduction copper and leaving the insulator nose long, NGK produces the Wide Range Plug. One that meets the broad thermal requirements of engines under high and low RPM conditions. With the exception of a couple of older applications, all the spark plugs in this catalogue employ copper core technology.

## FIRING END APPEARANCE

## SPARK PLUG INSTALLATION TIPS

- Refer to current NGK catalogue for correct spark plug selection
- Check condition and cleanliness of threads in cylinder head
- Ensure plug is gapped according to vehicle manufacturers specification (*fig 1*)
- Multi ground electrode and precious metal plugs should not be regapped - visual inspection only
- Install new spark plug *by hand* until it seats - (*fig 2*) a length of rubber tubing pushed over the insulator can be a useful aid for plug installation where access is difficult
- Tighten to specified torque setting as shown in the chart below (*fig 3*)
- If a torque wrench is unavailable then refer to vehicle/engine manufacturers installation instructions or the tightening angle advice which is displayed on current NGK packaging (excluding specialist race plugs). Note that this angle advice can differ between part numbers due to individual spark plug design (e.g. seating type, thread diameter and gasket material)
- It is important not to over or under tighten spark plugs during installation. Over-tightening can lead to distortion of the spark plug. Under-tightening can cause overheating due to poor heat dissipation. *In extreme cases incorrect tightening can cause spark plug breakage and/or engine damage*
- NGK does not recommend the application of lubricant to spark plug threads as the resultant reduction of frictional forces at the thread faces will render the torque charts inaccurate and over tightening could occur
- If a gasket type spark plug is re-installed, it should only require a further 1/12 of a turn after it has been seated
- Always carefully use the correct tools for removal/installation to prevent damage to the spark plug or engine
- Inspect spark plug cover and renew if necessary

# CONVERSION CHART (SPARK PLUGS)

## IMPORTANT:

This chart is furnished as a guide only. Certain design differences may exist between our spark plugs and another manufacturers; heat ratings can also vary. Always refer to the main application data to select the recommended spark plug for specific engines.

# NGK GLOW PLUG TYPES AND FEATURES

## METAL SHEATHED GLOW PLUGS

### Single Coil Types

Standard single coil glow plugs heats at a fairly uniform rate to its maximum temperature with a constant current consumption. Rapid Glow types have a single coil which changes its resistance as the temperature rises. This allows an initial high current draw to promote faster warm up, with a reduction in current draw as the temperature rises.

### QGS Types

Quick Glow System glow plugs are available in single & double coil types. They both use a very low resistance heating coil to allow enormous current flow for a very fast heating time. These glow plugs require strict regulation to prevent damage and are only used with a specifically designed QGS controller.

### SRM Types

Self-Regulating Metal glow plugs contain two coils. The heating coil at the tip of the probe provides the heat source; the second (regulating) coil allows an extremely fast warm up time to temperatures in excess of 900°C and once this temperature is reached can autonomously maintain a high final temperature allowing longer post heating times.

### AQGS Types

Advanced Quick Glow System glow plugs reach 1000°C in 2 seconds and can maintain this high temperature for long-term post glow capability to promote cleaner vehicle emissions.

## CERAMIC GLOW PLUGS

### SRC Types

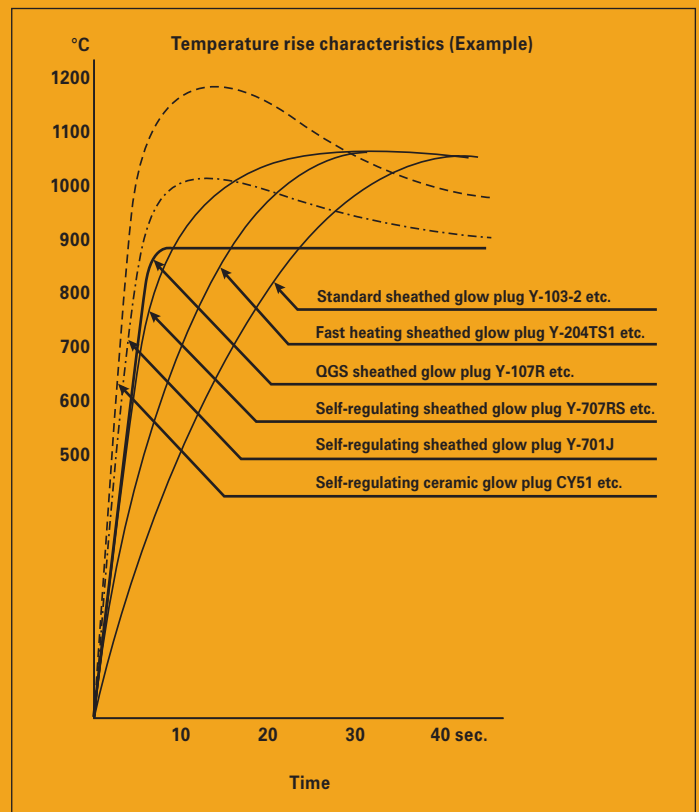

Self-Regulating Ceramic glow plugs reach temperatures in excess of 1000°C. With the use of ceramic, these glow plugs are afforded the greatest protection from the prolonged high temperatures involved with extended post glow heating periods.

### QGS Types

Similar to the metal sheathed QGS types, but offers faster heat up times to greater temperatures, although still requires strict regulation with a specialist QGS controller.

### NHTC Types

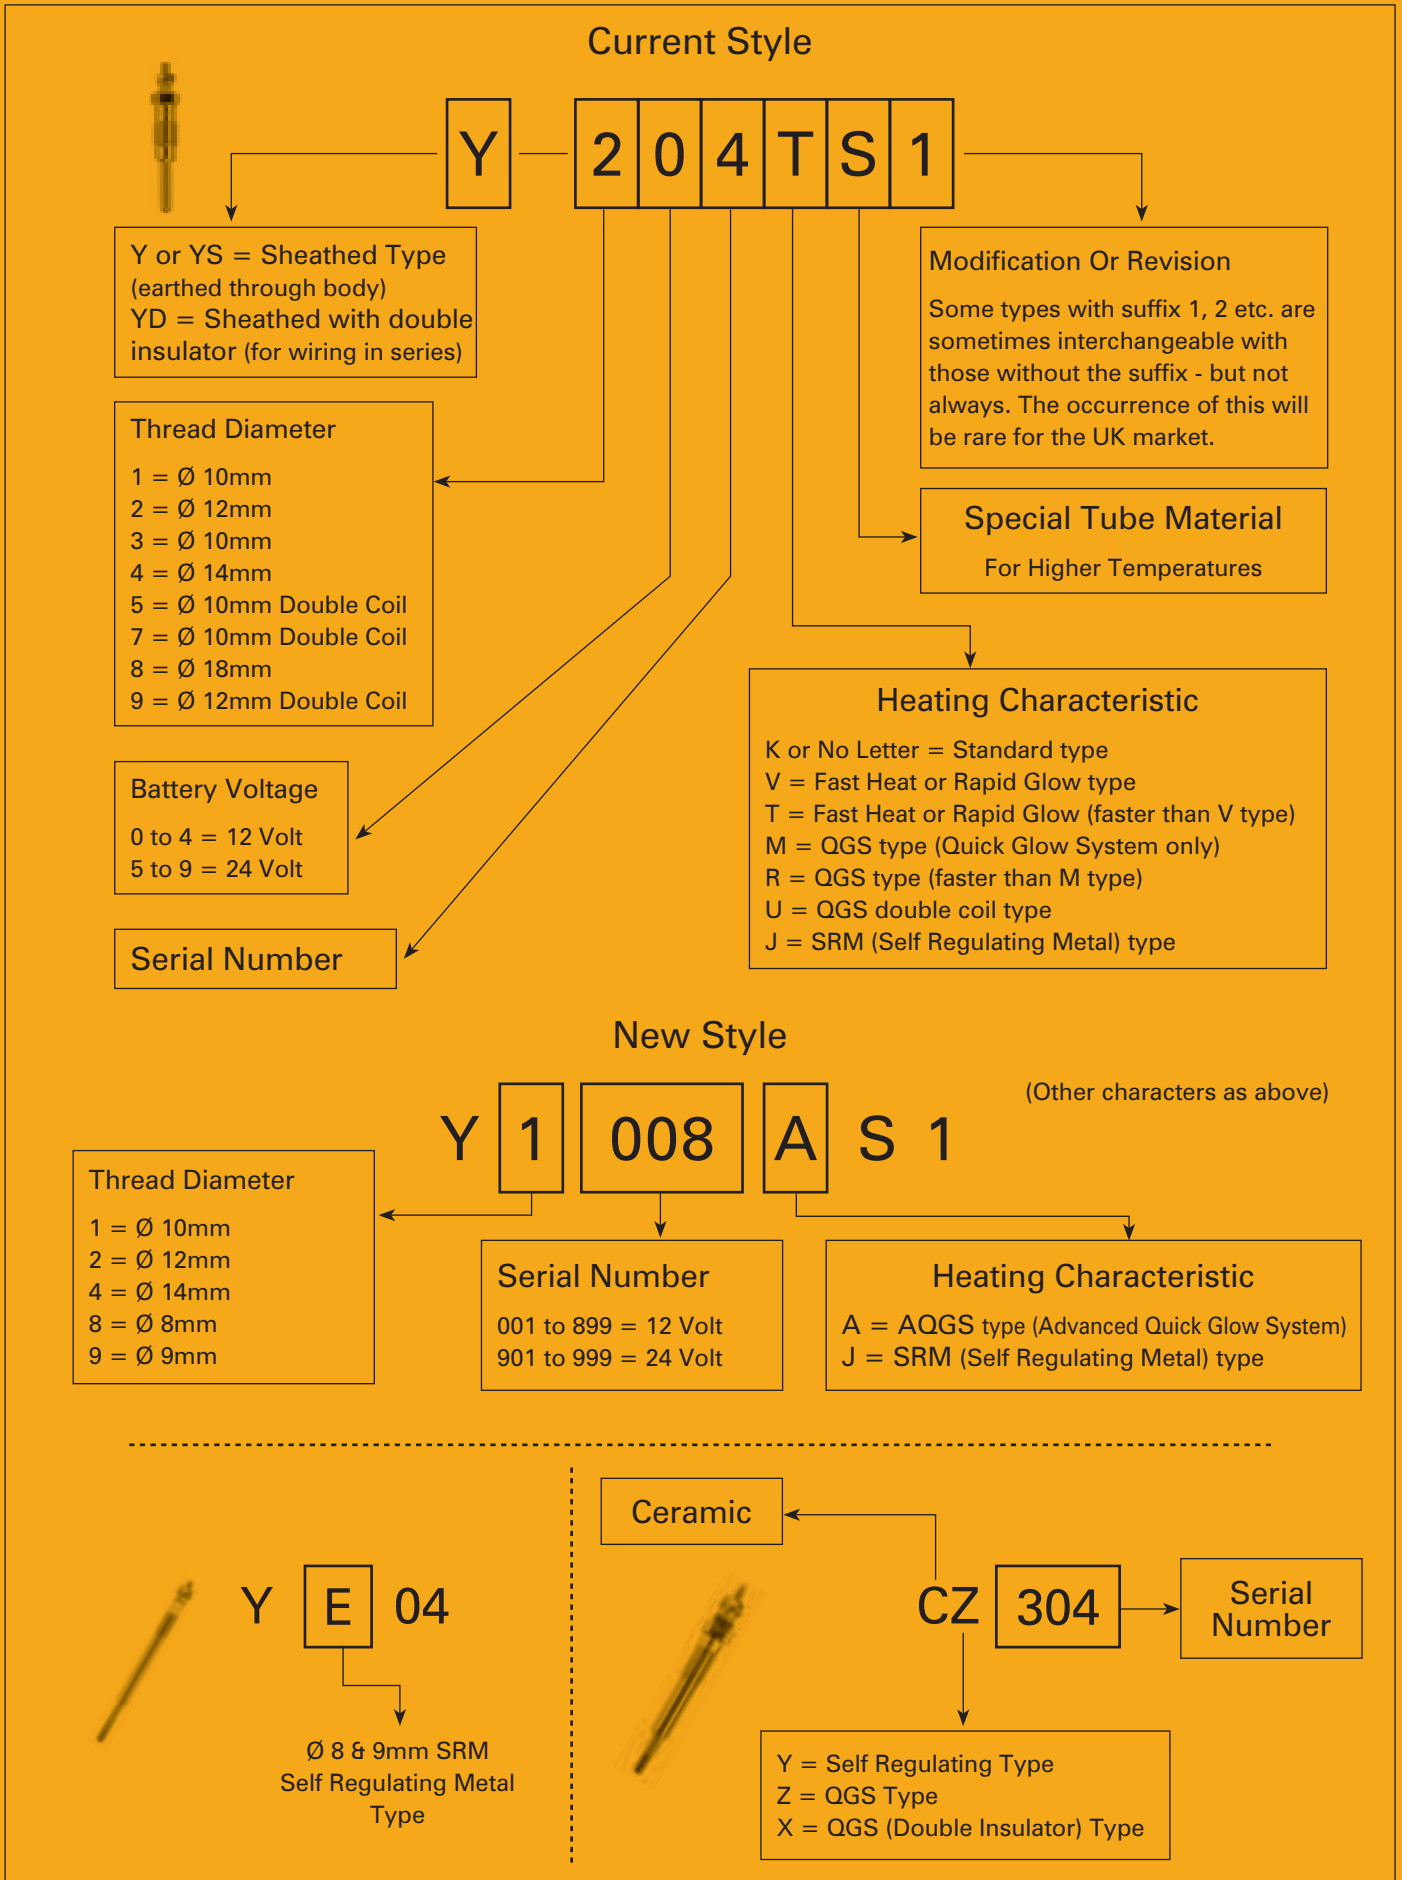

New High Temperature Ceramic glow plugs use the latest technology to allow extremely fast heat up times to eliminate the concept of pre-glow. They also have the ability to maintain post glow temperatures as high as 1350°C to further help vehicle manufacturers reduce engine emissions.

### Double Coil Type

# GLOW PLUG DESIGN SYMBOLS

## CORRECT USE OF GLOW PLUGS

It is essential that the correct voltage and current are used in line with the vehicle manufacturers recommendations. If the voltage or battery capacity is too low, the glow plug will not get hot enough and the vehicle may fail to start. If the voltage is too high the heating coil may melt or the glow plugs service life will be reduced.

The pre-heating time of glow plugs can vary significantly, dependant upon the technology of the glow plug in use. For example, standard type glow plugs may take 20 seconds to reach 800°C, whereas the latest ceramic types can reach in excess of 1000°C in 2 seconds.

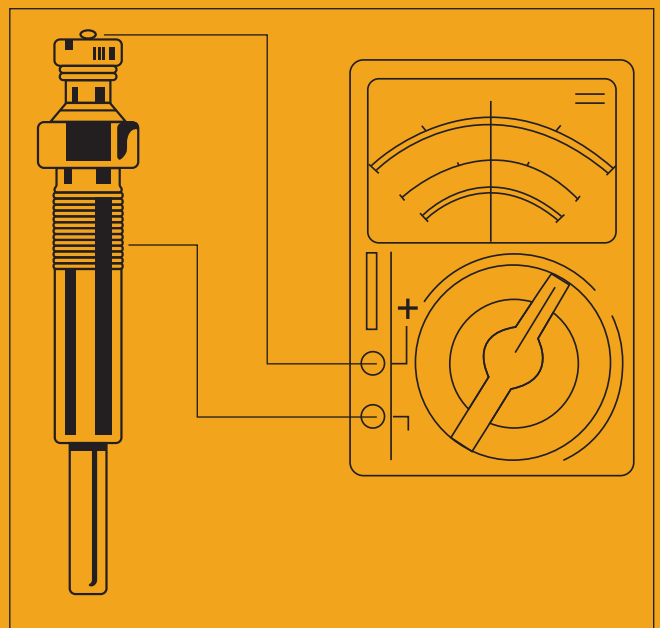

If starting difficulties are experienced, continuous cranking or leaving the ignition switched on without the engine running can lead to premature failure of the glow plugs and draining of the battery. A better method is to switch the power off and retry the starting procedure after a short period of time.

| Thread Diameter | Tightening Torque      |
|-----------------|------------------------|
| 8mm             | 8.5-15Nm (0.85-1.5Kgm) |
| 9mm             | 10Nm (1Kgm)            |
| 10mm            | 15-20Nm (1.5-2.0Kgm)   |
| 12mm            | 20-25Nm (2.0-2.5Kgm)   |
| 14mm            | 20-25Nm (2.0-2.5Kgm)   |
| 18mm            | 20-30Nm (2.0-3.0Kgm)   |

Always refer to the information shown on the NGK packaging or to the vehicle manufacturers instructions.

### Testing Sheathed Type Glow Plugs

In order to check the heating coil, measure its resistance as shown in the diagram (excluding double insulated, YD, CX type part numbers). Some resistance values are extremely low (such as some QGS types) and should only be tested with an Ohmmeter capable of recording values down to 0.1Ω. Testing glow plugs by connecting directly across a battery is NOT recommended as, apart from risk to personal injury, damage can occur to the internal construction of the glow plug if it is not designed to have continuous voltage applied (e.g. QGS types).

Resistance value ∞: The heating coil is broken

Resistance value less than 5 Ω: The heating coil is in good condition

## INTERPRETATION OF GLOW PLUG APPEARANCE

| Appearance  | Causes   | Recommended Counter Measure  |
|---|--|--|
| Melted Heater Tube  | <p><b>1. Abnormal Overheating</b></p> <p>a) Incorrect fuel injection timing or volume flow rate.</p> <p>b) Abnormal combustion due to excessive lubricating oil entering the combustion chamber.</p> <p><b>2. Excessive Voltage</b></p> <p>a) Incorrect glow plug has been fitted.</p> <p>b) Faulty controller relay or glow plugs switched on too long.</p> | <p>a) Check fuel injection.</p> <p>b) Check valve guides and piston rings.</p> <p>a) Confirm glow plug part number is correct.</p> <p>b) Check controller relay operation.</p> |
| Heating Coil Broken<br>$\infty$ Resistance  | <p>a) See excessive voltage above.</p> <p>b) See carbon build up below.</p>  |  |
| Broken Heater Tube  | Excessive turbulence or overheating due to incorrect fuel injection timing or volume flow rate.  | Check fuel injection timing and volume flow rate.  |
| Shiny appearance on heater tube<br>Swirl marks on heater tube<br>Carbon build up at taper seat area | Build up of carbon surrounding glow plug heater tube in combustion chamber.  | Ream excessive carbon from glow plug hole prior to fitment.  |

# SPARK PLUG COVERS

## STANDARD PLUG COVERS

## EPDM RUBBER PLUG COVERS

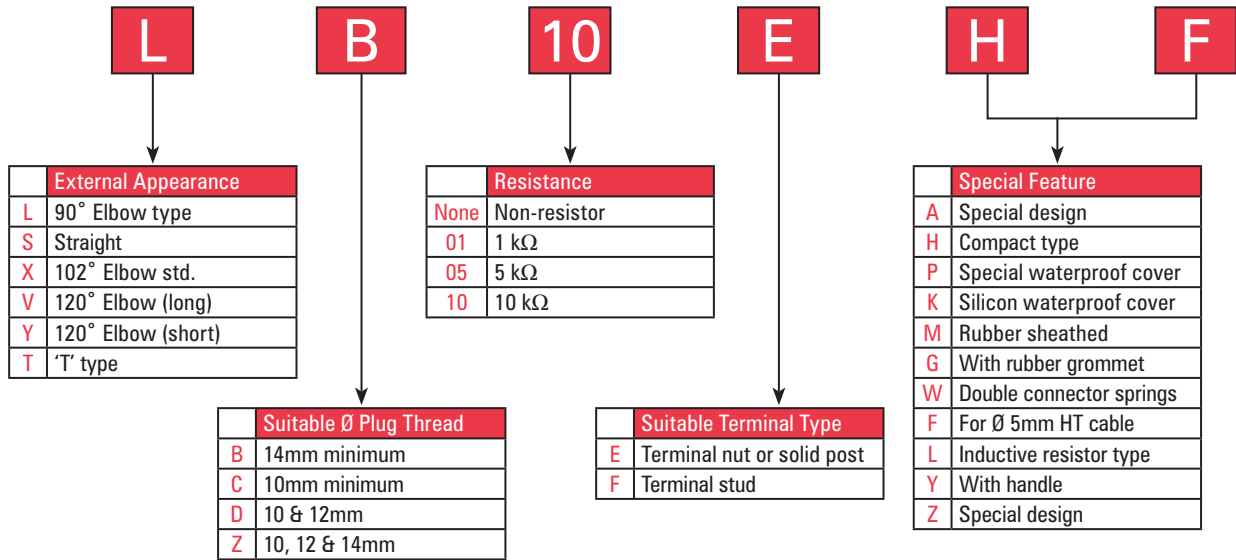

The NGK range of resistor covers are designed to give perfect noise suppression across all frequencies whilst engine performance is not adversely affected whatsoever.

Featuring a resistor element pressed in between the plug terminal and the high tension wire connection, the construction is extremely durable, the resistor element is long enough to prevent interior flashover, and steady resistance is maintained. Superlative ceramic materials are incorporated that resist deterioration and have small resistance variation under over-load, whilst the plug connector is made of sturdy phenolic resin, practically oblivious to tremendous heat and high tension, and very rugged rubber material. The heat press insertion makes the construction all the more tough and vibration-resistant. Special rubber liners on both ends prevent moisture from causing electrical leakage.

All motorcycle manufacturers now comply with current legislation which demands a standard of noise suppression on every vehicle. This is achieved usually by fitting NGK resistor covers though in many cases a combination of NGK resistor covers and NGK resistor spark plugs (R type) is necessary to satisfy the ministry tests. It is emphasized that despite the use of both resistor covers and spark plugs in such engines, due to the unique and superior construction of NGK products there is no loss of performance or shortening of service life.

LB05EMH and SD05FM being of tough EPDM rubber construction are intended for competition/trial applications.

To assist in identifying the red or blue coloured variant for popular plug covers a small change to the descriptive part number has been instigated. There is no change to the Stock Number. Black covers which are considered standard are unaffected.

Description: 90° Elbow Type      Material: Phenolic Resin

**Application: Piaggio (various 125, 150cc)**

| Part No.    | Stock No. | Colour | Resistor | Ø Plug | Terminal Type   |
|-------------|-----------|--------|----------|--------|---|
| <b>V05E</b> | 6665      | Black  | 5 kΩ     | 14mm   |  |

Description: 120° Elbow (Long) Type      Material: Phenolic Resin

**Application: Piaggio (various 125, 150cc)**

| Part No.       | Stock No. | Colour | Resistor | Ø Plug | Terminal Type   |
|----------------|-----------|--------|----------|--------|---|
| <b>LB05EPK</b> | 8342      | Black  | 5 kΩ     | 14mm   |  |

Description: 90° Elbow Type      Material: Phenolic Resin

| Part No.      | Stock No. | Colour | Resistor | Ø Plug    | Terminal Type   |
|---------------|-----------|--------|----------|-----------|---|
| <b>VD05EM</b> | 8422      | Black  | 5 kΩ     | 10 - 12mm |  |

Description: 120° Elbow (Long) Type      Material: EPDM Rubber

| Part No.      | Stock No. | Colour | Resistor | Ø Plug | Terminal Type   |
|---------------|-----------|--------|----------|--------|---|
| <b>LB05EZ</b> | 8744      | Black  | 5 kΩ     | 14mm   |  |

Description: 90° Elbow Type      Material: Phenolic Resin

| Part No.       | Stock No. | Colour | Resistor | Ø Plug    | Terminal Type   |
|----------------|-----------|--------|----------|-----------|---|
| <b>VD05EMH</b> | 7744      | Black  | 5 kΩ     | 10 - 12mm |  |
| <b>VD05FMH</b> | 8425      | Black  | 5 kΩ     | 10 - 12mm |  |

Description: 120° Elbow (Compact) Type      Material: EPDM Rubber

| Part No.      | Stock No. | Colour | Resistor | Ø Plug    | Terminal Type   |
|---------------|-----------|--------|----------|-----------|---|
| <b>SD05FP</b> | 8325      | Black  | 5 kΩ     | 10 - 12mm |  |

Description: Straight Type      Material: Phenolic Resin

| Part No.       | Stock No. | Colour | Resistor | Ø Plug    | Terminal Type   |
|----------------|-----------|--------|----------|-----------|---|
| <b>SD05FGA</b> | 8683      | Black  | 5 kΩ     | 10 - 12mm |  |

Description: Straight with Grommet      Material: Phenolic Resin

**Application: Honda VT600, XL600**

Join us on [facebook.com/ngksparkplugsuk](https://www.facebook.com/ngksparkplugsuk) or at [twitter.com/ngk\\_uk](https://twitter.com/ngk_uk) for motorsport news, competitions and more, to fire us a question about NGK or a technical query about our products. We're waiting...

**TRUST.**

As the world's No.1 OE manufacturer of spark plugs and the pioneers of copper core technology, trust NGK to deliver optimum performance whatever car you drive

- Perfect Ignition ■ Better cold weather starting ■ Better engine performance
- More complete combustion ■ Better emissions and cleaner exhaust
- Wider heat range over all driving conditions

**CORRUGATIONS**  
To prevent flash over

**SPECIAL PACKING**  
Excellent air tightness  
Robust construction

**INSULATOR**  
Made of high purity alumina providing better heat dissipation, higher electrical insulation and stronger thermal shock resistance

**METAL SHELL**  
Plated and chromated to guard against corrosion

**COPPER CORE**

Deeply inserted in the centre electrode for improved thermal conductivity. Providing an ultra wide heat range plug that gives maximum performance at both high and low speeds

**CENTRE & GROUND ELECTRODES**

Special nickel alloy ensures superior resistance and durability
